

Biogeography. Lecture 12

Alexey Shipunov

Minot State University

February 26, 2014

Outline

Basics of ecology

Ecosystems and biosphere

Basics of ecology

Ecosystems and biosphere

Biosphere, geomerid or Gaia

- ▶ All living things together with ecological factors
- ▶ Biomass: living matter
- ▶ Water, oxygen, carbon dioxide, nitrogen and phosphorous cycles
- ▶ Biosphere consists of biomes, geographically “packed” ecosystems

Summary

- ▶ Biosphere (living Earth) is a biggest ecosystem
- ▶ Phosphorous cycle is the most critical to biosphere
