

# Short guidelines for biogeography presentation

## Recommendations

1. Make a Power Point presentation about particular paper. There are multiple resources in Internet with a title like “How to read a scientific/research paper” (like <http://www.google.com/search?q=how+to+read+scientific+research+paper>) which could be of some help.
2. Try not to exceed 8 slides. Typically, every slide requires 2 min (or sometimes less) of explanation therefore you will fit in 15 min presentation.
3. Your presentation should emphasize: (1) what is this paper about? (2) what are main discoveries/achievements of this paper? (3) what do you think author(s) of paper did not do?
